American History: A Very Short Introduction Paul S. Boyer 2012-08-16 In a miracle of concision, Paul S. Boyer provides a wide-ranging and authoritative history of America, capturing in a compact space the full story of our nation. Ranging from the earliest Native American settlers to the presidency of Barack Obama, this Very Short Introduction offers an illuminating account of politics, diplomacy, and war as well as the full spectrum of social, cultural, and scientific developments that shaped our country. Here is a masterful picture of Americas achievements and failures, large-scale socio-historical forces, and pivotal events. Boyer sheds light on the colonial era, the Revolution and the birth of the new nation; slavery and the Civil War; Reconstruction and the Gilded Age; the Progressive era, the Roaring Twenties and the Great Depression; the two world wars and the Cold War that followed; right up to the tragedy of 9/11, the wars in Iraq and Afghanistan, and the epoch-making election of Barack Obama. Certain broad trends shape much of the narrative--immigration, urbanization, slavery, continental expansion, the global projection of U.S. power, the centrality of religion, the progression from an agrarian to an industrial to a post-industrial economic order. Yet in underscoring such large themes, Boyer also highlights the diversity of the American experience, the importance of individual actors, and the crucial role of race, ethnicity, gender,

and social class in shaping the contours of specific groups within the nations larger tapestry. And along the way, he touches upon the cultural milestones of American history, from Tom Paines The Crisis to Allen Ginsbergs Howl. American History: A Very Short Introduction is a panoramic history of the United States, one that covers virtually every topic of importance--and yet can be read in a single day.

Digital Logic Testing and Simulation Alexander Miczo 2003-10-24 Your road map for meeting today's digital testing challenges Today, digital logic devices are common in products that impact public safety, including applications in transportation and human implants. Accurate testing has become more critical to reliability, safety, and the bottom line. Yet, as digital systems become more ubiquitous and complex, the challenge of testing them has become more difficult. As one development group designing a RISC stated, "the work required to . . . test a chip of this size approached the amount of effort required to design it." A valued reference for nearly two decades, Digital Logic Testing and Simulation has been significantly revised and updated for designers and test engineers who must meet this challenge. There is no single solution to the testing problem. Organized in an easy-to-follow, sequential format, this Second Edition familiarizes the reader with the many different strategies for testing and their applications, and assesses the strengths and weaknesses of the various approaches. The book reviews the building blocks of a successful testing strategy and guides the reader on choosing the best solution for a particular application. Digital Logic Testing and Simulation, Second Edition covers such key topics as: \* Binary Decision Diagrams (BDDs) and cycle-based simulation \* Tester architectures/Standard Test Interface Language (STIL) \* Practical algorithms written in a Hardware Design Language (HDL) \* Fault tolerance \* Behavioral Automatic Test Pattern Generation (ATPG) \* The development of the Test Design Expert (TDX), the many obstacles encountered and lessons learned in creating this novel testing approach Up-to-date and comprehensive, Digital Logic Testing and Simulation is an important resource for anyone charged with pinpointing faulty products and assuring quality, safety, and profitability.

Anywhere Viii Sean Lowry 2019-11-30 Artists and curators have long reached beyond the constraints of established institutional structures and traditional exhibition spaces. These tendencies were first clearly articulated (with some notable historical avant-garde precedents) in the language that framed conceptual and systems-based art in the 1960s and 1970s. The focus then, as it is today, was upon locating or creating alternative circuits. Today, notwithstanding our significantly technologically augmented capacity to reach and create new audiences, much contemporary artistic activity

still invariably plays directly to an audience of connected peers. Moreover, given that much of this activity is now documented and disseminated as it happens through its surrounding peer network, the robustness of documentation and critical discussion can become easily distorted. Consequently, an inherent correlation to social acceptance and favorability can limit our capacity to meaningfully evaluate quality, and often excludes contributions outside a core group. Also, given that much art now shares media with other databases and websites, algorithmically driven perceptions of popularity can further influence ways in which art is evaluated, interpreted and valued. This situation invariably presents challenges to artists and curators seeking to establish new audiences or disseminate ideas. Today, new artistic and curatorial approaches are emerging in tandem with digitally-activated modes of presentation and dissemination distinguished by perpetual reproducibility, multiple intersecting temporalities and materializations, and the subsidence of physical space. Significantly, many of these approaches are no longer necessarily connected to singular events or spaces and are perhaps better understood as omnidirectional movements between modes of conception, production and dissemination connected through the screen as a communal space. This communal space might offer either access to new works, illuminate the existence of works understood to be elsewhere in time and space, or offer multiple or alternative materializations, versions, attributions, interpretations and representations of existing works. Artistic research can be represented in multiple ways as it moves between modes of conception, production and dissemination. This volume explores a broad range of questions associated with presenting, experiencing, discussing and evaluating art located anywhere and elsewhere in space and time. We are delighted to welcome you to the many worlds contained within.
